

BUILD FOR GOOD 2026

Tech & AI for Social Good · A Sama Initiative

Theme Framework: Six Lived Conditions

Each theme is named as a lived reality in plain language — not a policy category. Each carries a Hindi anchor word for recall, a brief invitation for participants, five sub-themes, and three concrete Tech/AI ideas per sub-theme.

#	Hindi Name	Devanagari	English Theme
01	ROZGAAR	रोज़गार	Work, Income & Economic Dignity
02	SWASTHYA	स्वास्थ्य	Health, Wellness & Care Access
03	VIDYA	विद्या	Learning, Skilling & Educational Access
04	DHARTI	धरती	Climate, Environment & Ecological Resilience
05	AWAAZ	आवाज़	Voice, Safety & Social Access
06	SHANTI	शान्ति	Peace, Pluralism & Human Dignity

01

ROZGAAR रोज़गार

Work, Income & Economic Dignity

Build tools that help people earn with dignity, grow their income, and understand their economic rights — especially for India's 450 million informal workers.

► **Daily wage worker income tools** — Tracking, access and rights for daily earners

Tech & AI Ideas:

1. AI-powered wage tracker that uses voice input for daily earnings, auto-detects anomalies, and alerts workers when wages fall below legal minimums
2. WhatsApp chatbot that explains MNREGA rights, helps workers register complaints, and checks payment status in local language
3. Offline-first app for construction workers to log work hours, generate digital proof of employment, and build a verifiable income history for loan applications

► **Micro-entrepreneur support** — Small shop owners, street vendors, artisans

Tech & AI Ideas:

1. Inventory management tool using phone camera to photograph stock, auto-generate reorder alerts, and suggest pricing based on local market data
2. AI assistant for street vendors that predicts best pitch locations and times using foot traffic patterns and weather data
3. Digital ledger app for artisans with voice-to-text order entry, buyer history, and one-tap invoice generation in regional languages

► **Women's economic participation in informal sectors** — Self-help groups, home-based work, domestic labour

Tech & AI Ideas:

1. Platform connecting home-based garment workers directly to buyers, with AI quality-check using phone camera before dispatch
2. Self-help group (SHG) financial management app with simple audio interface for women with low literacy
3. AI skill-assessment tool that maps a woman's existing skills (cooking, stitching, caregiving) to formal certifiable vocational courses

► **Farmer income stability** — Crop pricing, input costs, insurance access

Tech & AI Ideas:

1. SMS/IVR system that delivers real-time mandi prices in the farmer's dialect, with auto-comparison to MSP and nearby markets
2. AI crop insurance advisor that uses satellite imagery + weather data to proactively suggest PM Fasal Bima schemes and guide claim filing
3. Input cost tracker that logs fertiliser, seed, and labour expenses against projected yield to give farmers a real-time profitability view

► **Skill-job matching for first-time workers** — Youth entering the workforce for the first time

Tech & AI Ideas:

1. Voice-based job matching tool where first-time workers describe what they can do in their language, matched to local opportunities without needing a written resume
2. AI interview preparation coach that simulates common employer questions in Hindi and regional languages, gives feedback on communication
3. Verified digital skill passport for ITI graduates that employers can scan and trust — reducing the gap between qualification and employment

Build tools that bring healthcare closer — in distance, in language, and in cost — for the millions who face a doctor's visit as a day's journey.

► **Rural and remote healthcare access** — Distance, cost, awareness barriers in Tier 3/4 India

Tech & AI Ideas:

1. AI symptom checker in 12 Indian languages with offline capability — helps ASHA workers triage patients and decide on referral urgency
2. Telemedicine platform designed for 2G networks with async video consultations — doctor records advice, patient watches when signal is available
3. Digital health camp planner that uses census + disease burden data to help NGOs and PHCs schedule mobile health camps in underserved villages

► **Maternal and child health** — Especially Tier 3 and tribal contexts

Tech & AI Ideas:

1. Automated WhatsApp reminder system for antenatal checkups, vaccination schedules, and nutrition milestones — in local language with audio option
2. AI-powered anaemia screening tool using phone flash and fingernail colour analysis — designed for ASHA workers with no lab access
3. Community birth registry app for tribal areas that creates digital birth records offline and syncs when connected — addressing the undocumented child problem

► **Mental health for youth** — Deeply needed, deeply unaddressed

Tech & AI Ideas:

1. Anonymous peer-support platform for college students built on moderated group chats — AI monitors for crisis signals and escalates to counsellor
2. AI mental wellness companion in Hindi/regional languages that uses CBT-based conversation to support users between counselling sessions
3. Burnout and stress early warning tool for students — tracks sleep, study hours, and self-reported mood, offers personalised coping suggestions

► **Medicine availability and affordability** — Access to essential medicines in small towns

Tech & AI Ideas:

1. Crowd-sourced medicine availability map where pharmacists and patients mark stock status of essential drugs in their area
2. AI generic medicine suggester — patient inputs brand name, app shows Jan Aushadhi equivalents, availability nearby, and price comparison
3. Expiry-date donation network connecting hospitals and pharmacies with surplus near-expiry medicines to rural health camps

► **Health documentation for mobile workers** — Workers without fixed addresses or records

Tech & AI Ideas:

1. Portable digital health card for migrant workers — stores vaccination history, blood group, chronic conditions — accessible via QR, works offline
2. AI health history builder that reconstructs a patient's medical history through guided voice conversation — for those who have never had written records
3. Blockchain-anchored health identity system for seasonal agricultural workers that travels with them across states

03

VIDYA विद्या

Learning, Skilling & Educational Access

Build tools that make learning possible for those the system forgot — first-generation learners, school dropouts, workers who need to upskill without stopping work.

► **First-generation learner support** — Neither parent went to college — nothing to fall back on

Tech & AI Ideas:

1. AI mentor chatbot for first-generation college students — helps navigate admission, hostel, financial aid, and social anxiety in plain Hindi/regional language
2. Peer network platform connecting first-gen students across institutions — for shared guidance, emotional support, and practical tips no one teaches
3. Career GPS tool that maps a first-gen student's background, interests, and constraints to realistic, step-by-step career paths with role models from similar origins

► **Learning in mother tongue / local languages** — Millions learn best in a language school ignores

Tech & AI Ideas:

1. AI-powered curriculum translator that converts NCERT content to any of India's 22 scheduled languages with culturally adapted examples
2. Voice-first learning app for low-literacy adults in tribal languages — uses image association and audio narration, no reading required
3. Multilingual STEM explainer tool — student asks a question by voice in their language, receives explanation with local analogies and diagrams

► **School dropout prevention systems** — Catch the at-risk child before the system loses them

Tech & AI Ideas:

1. Attendance pattern AI for government schools — detects early warning signals of dropout risk and alerts teachers and ASHA workers
2. Family engagement platform that sends simple weekly updates to parents (even feature phone users) about their child's progress — in local language via voice call

3. Conditional learning incentive tracker — gamified micro-scholarship system where students earn digital credits redeemable for school supplies

► **Vocational and trade skill documentation** — Skills that exist but are invisible to the formal economy

Tech & AI Ideas:

1. Video-based skill portfolio builder — workers record short videos of their work, AI assesses skill level and generates a verifiable credential
2. Recognition of Prior Learning (RPL) assistant that maps a worker's years of experience to NSQF certification pathways under the NSD framework
3. Digital apprenticeship logbook that documents daily learning in trades (plumbing, carpentry, electrical) with photo proofs — accepted by employers

► **Bridge learning for returnees** — Those returning to education after years away

Tech & AI Ideas:

1. Adaptive diagnostic tool that assesses a returning adult learner's actual knowledge level (not age-grade assumption) and builds a personalised catch-up plan
2. Micro-learning app in 5-minute daily lessons for working adults — learns around their shift schedule, tracks progress, unlocks certificates
3. AI study buddy for women returning to education after marriage/motherhood gap — combines academic content with community peer support

04

DHARTI धरती

Climate, Environment & Ecological Resilience

Build tools for the farmers, the water-carriers, the waste-pickers, and the forest communities who live the climate crisis daily — not as a future risk but as today's reality.

► **Small and marginal farmer climate adaptation** — For farmers with less than 2 hectares and no insurance buffer

Tech & AI Ideas:

1. Hyperlocal weather advisory via IVR — farmer calls a number, gets a 7-day forecast and crop-specific action advice in their dialect
2. AI crop variety recommender that uses soil type, rainfall projections, and market data to suggest climate-resilient seeds for the coming season
3. Satellite-based crop stress monitor that sends SMS alerts to farmers when their specific plot shows signs of drought, pest, or waterlogging stress

► **Water scarcity and access** — A Tier-3 daily reality, not a future problem

Tech & AI Ideas:

1. Community water budget tracker — app for gram panchayats to monitor borewell levels, usage, and trigger conservation protocols when thresholds are crossed
2. AI-powered groundwater depletion predictor using 10-year CGWB data, local well depth reports, and rainfall trends — gives 3-month outlook
3. Women's water-walk mapper — documents time and distance women travel for water, generates evidence reports for WASH programme funding

► **Waste and sanitation in small towns** — Where systems exist but barely function

Tech & AI Ideas:

1. Garbage collection complaint and tracking app for Class-C municipalities — residents report, ward supervisors respond, data feeds into SBM dashboard
2. AI waste classification guide for kabaddi-walas (waste pickers) — camera identifies material type, shows current market rate, nearest collection point
3. Decentralised composting network — connects housing societies, schools, and street vendors to nearby composting hubs, tracks tonnes diverted from landfill

► **Natural disaster preparedness and early warning** — At the local level, in local language

Tech & AI Ideas:

1. Offline-capable village disaster response app — pre-loads evacuation routes, emergency contacts, and protocol for cyclone/flood/earthquake — no internet needed during crisis
2. Community flood sensor network using low-cost IoT devices in rivers — sends WhatsApp alerts to village leaders when water levels cross thresholds
3. Post-disaster livelihood recovery tracker — documents loss of crops, tools, livestock for faster insurance claims and government relief access

► **Sustainable income from land** — Forestry, organic farming, ecological livelihoods

Tech & AI Ideas:

1. Non-timber forest produce (NTFP) market connector — links Adivasi collectors of mahua, tendu, lac, honey to fair-price buyers and government procurement
2. Organic certification navigator — step-by-step AI guide for small farmers to document and achieve PGS-India organic certification without an agent
3. Carbon credit eligibility checker for farmers adopting zero-tillage or agroforestry — maps their plot, calculates sequestration, guides registration

05

AWAAZ आवाज़
Voice, Safety & Social Access

Build tools that help people be heard, be safe, and access what they are already entitled to — for communities who are present in India but invisible to its systems.

► **Women's safety, mobility and support** — Tools that make movement and life safer for women

Tech & AI Ideas:

1. Safe-route mapping app built on community-sourced data — women rate and report areas, app suggests safest routes and alerts contacts during travel
2. AI legal companion for women facing domestic violence — explains rights, nearby shelter options, and files complaints via voice in local language without needing to visit a police station
3. Menstrual health and safety platform for girls in rural schools — combines education, product access, and anonymous peer support

► **Access to government schemes and entitlements** — People who qualify but cannot navigate the system

Tech & AI Ideas:

1. Entitlement eligibility checker — user answers 8 voice questions, app shows every central and state scheme they qualify for with exact application steps
2. AI form-filling assistant in 12 languages — takes document photos, auto-fills government forms, flags missing documents before submission
3. Grievance follow-up bot — files RTIs and complaint follow-ups on behalf of users via WhatsApp when government applications go unanswered

► **Documentation for those without records** — Migrant workers, stateless individuals, undocumented communities

Tech & AI Ideas:

1. Community document drive organiser — helps NGOs run Aadhaar, ration card, and birth certificate camps with pre-registration, slot booking, and follow-up tracking
2. AI evidence builder for undocumented residents — compiles witness testimonies, utility bills, and photographs into legally structured affidavits for documentation applications
3. Migrant worker identity wallet — portable digital ID that accumulates verifiable evidence of residence, employment, and identity over time even without Aadhaar

► **Anti-discrimination tools** — Caste, gender, disability — lived experiences that need systemic response

Tech & AI Ideas:

1. Caste discrimination incident reporting platform with anonymity protection, legal referral, and data aggregation for policy advocacy
2. Disability access audit app — users document inaccessible public infrastructure with geo-tagged photos, generates reports sent to municipal bodies
3. AI ally training tool for HR teams and panchayat members — scenario-based learning on recognising and responding to workplace and community discrimination

► **Community and civic participation** — For those excluded from decision-making spaces

Tech & AI Ideas:

1. Gram sabha engagement platform — sends simplified summaries of agenda items to villagers via WhatsApp before meetings, collects digital feedback for the sarpanch
2. Youth civic education game — interactive story-based simulation of local governance, RTI, and voter rights in regional languages
3. Participatory budget tracker — lets community members view, comment on, and flag concerns about panchayat expenditures in real time

06

SHANTI शान्ति

Peace, Pluralism & Human Dignity

Build tools that bridge divides, counter hate, support those displaced by conflict, and preserve the stories of communities whose histories are at risk of being lost. The world doesn't need more weapons. It needs more builders of peace.

► **Inter-community dialogue and peacebuilding** — At village, city, district and national scale

Tech & AI Ideas:

1. Structured dialogue platform for communities in tension — AI moderates online conversations between groups with different perspectives, surfaces common ground
2. Story exchange app — members of different communities (caste, religion, region) share anonymised life stories, AI clusters narratives to show shared experiences
3. Community peace index tool — local NGOs track indicators of social tension (rumour spread, incidents, social media spikes) and receive early warning alerts

► **Countering misinformation and hate speech** — Especially in low-literacy, high-WhatsApp contexts

Tech & AI Ideas:

1. WhatsApp fact-check bot in Hindi and regional languages — user forwards a message, bot returns verdict with source explanation within 60 seconds
2. AI hate speech detector trained on Indian language datasets (including code-switched Hindi-English) for content moderation on local platforms
3. Community digital literacy game — teaches elders and teenagers to identify forwarded misinformation through play-based modules in local language

► **Refugee, displaced person and stateless community support** — Those between nations and without protection

Tech & AI Ideas:

1. Multilingual legal rights companion for asylum seekers in India — explains refugee law, UNHCR registration process, and available NGO support in 20 languages
2. Safe house and shelter finder for internally displaced persons — maps verified shelters, food distribution points, and legal aid centres updated in real time

3. Skills-to-work platform for refugees and displaced workers — matches existing skills to local employment opportunities while navigating legal work restrictions

► **Historical memory, truth and reconciliation** — Preserving what communities are in danger of losing

Tech & AI Ideas:

1. Oral history archiving tool for elders — simple voice recording app with AI transcription, translation, and tagging in endangered and regional languages
2. Community memory map — geo-tagged stories, photographs, and testimonies that document the lived history of displaced or endangered communities
3. Restorative justice facilitation platform — digital tool to support community-led reconciliation processes with structured documentation and agreement tracking

► **Cross-border and cross-culture collaboration** — Youth diplomacy and shared problem-solving

Tech & AI Ideas:

1. Youth peacebuilding project platform — connects student teams across South Asian countries (India, Pakistan, Bangladesh, Nepal, Sri Lanka) on shared social challenges
2. AI cultural translation layer — not just language, but context, humour, and cultural reference — for cross-border team collaboration tools
3. Shared climate data platform for river basin communities across borders — farmers on both sides of the India-Bangladesh border collaborating on flood management

► **Conflict early warning at community level** — Local tension monitoring and de-escalation support

Tech & AI Ideas:

1. Community reporter network — trained local volunteers submit structured incident reports, AI identifies escalation patterns and triggers NGO/authority response
2. Social media tension scanner in Indian languages — monitors for coordinated hate campaigns targeting specific communities and alerts civil society responders
3. De-escalation support app for community leaders (sarpanches, imams, priests, teachers) — provides scripts, mediation guides, and connects to peace professionals during local crises
